China Warehouse

Guangzhou desk — receiving, labelling and loading

THIS DESK IS RESPONSIBLE FOR

- Every box that arrives at the Guangzhou counter is recorded the same day
- Every consignment is weighed, photographed and given a QR label
- Cargo is placed on the correct loading table for its route

china@aitransit.co.zm · Department

Contents

01 Your home screen

This is what is happening on the floor today. The two clocks are China and Zambia, so you always know what time it is at the other end before you telephone.

02 Receiving cargo

The most important screen you use. Everything downstream — the price, the invoice, the customer's tracking page — is built from what you type here.

03 The two loading tables

Cargo waiting to leave China sits on a loading table — one for Guangzhou, one for Hong Kong. There are exactly two and they never close.

04 Finding a consignment

One box, and it accepts almost anything a customer might read out to you over the telephone.

05 Customers

Everyone the China desk has ever registered cargo for. Record a customer once and they are in the book from then on.

06 Customer requests

Bookings and collection requests a customer has sent from the website, waiting for the China desk to act on them.

Before you start

Signing in

Everyone at AITRANSIT signs in at the same address with their own email and password. The system knows your department and opens your own screens — you never choose a role.

Your login **china@aitransit.co.zm**

ON EVERY SCREEN

The sidebar on the left is your department's menu — it only ever shows what your desk is allowed to open. The search box at the top accepts a tracking number, a customer, a phone number or a QR scan. Your name is at the bottom of the sidebar, with the language switch and the light/dark switch beside it.

GOOD TO KNOW

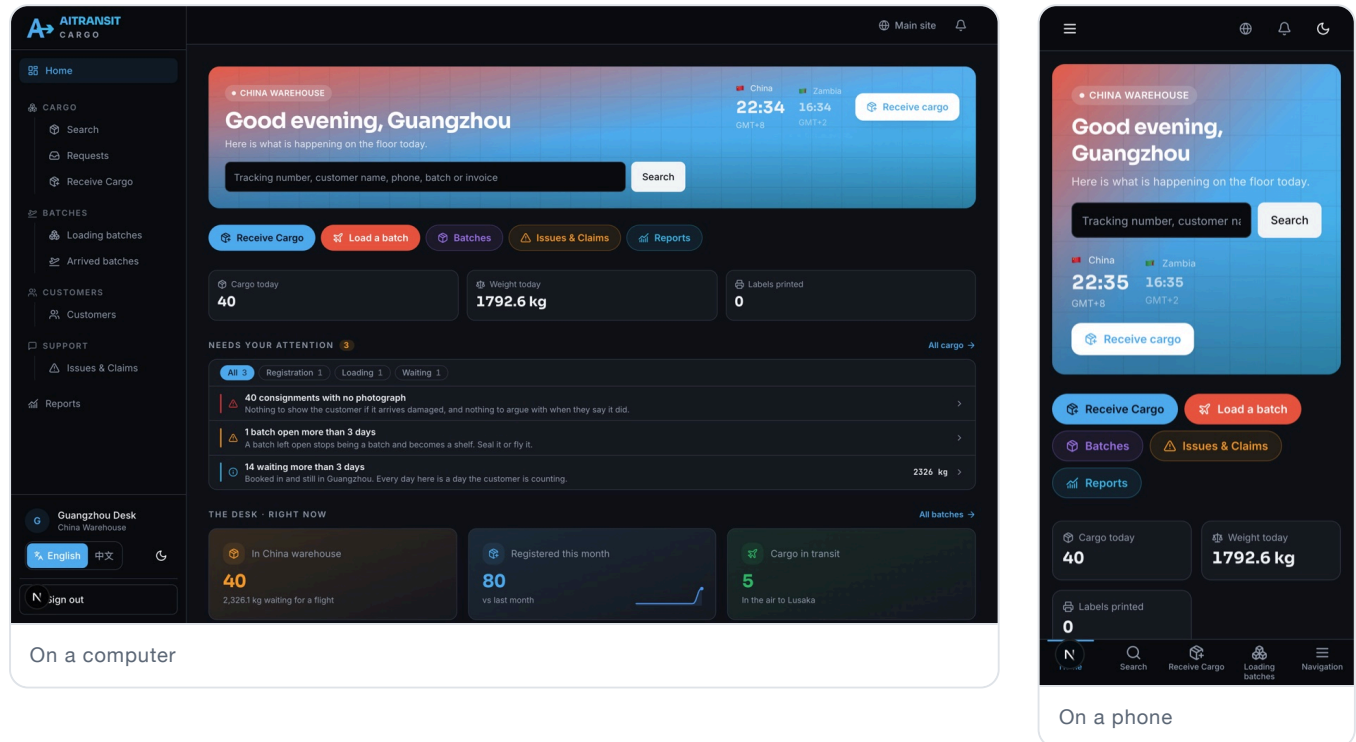

Every screen in this system is available in English and 中文. The switch is at the bottom of the sidebar, beside your name.

IF SOMETHING IS WRONG

Do not work around it. A wrong record is harder to fix than a missing one — tell your supervisor, or raise it under Issues & Claims, and let the system record what happened.

Your home screen

This is what is happening on the floor today. The two clocks are China and Zambia, so you always know what time it is at the other end before you telephone.

- 1 Read Needs your attention first. Anything listed there is already late or already wrong.
- 2 Use the search box for a tracking number, a customer name, a phone number or a batch.
- 3 The two loading tables are below — Guangzhou and Hong Kong. They tell you what is waiting to fly.
A table showing Empty means the last flight has gone and nothing has been placed on it since.
- 4 Receive cargo is the button you will use most. Everything else on this screen is here so you know what to do between boxes.

GOOD TO KNOW

Cargo today counts what you have registered since midnight China time, not since midnight in Lusaka.

Receiving cargo

The most important screen you use. Everything downstream — the price, the invoice, the customer's tracking page — is built from what you type here.

On a computer

On a phone

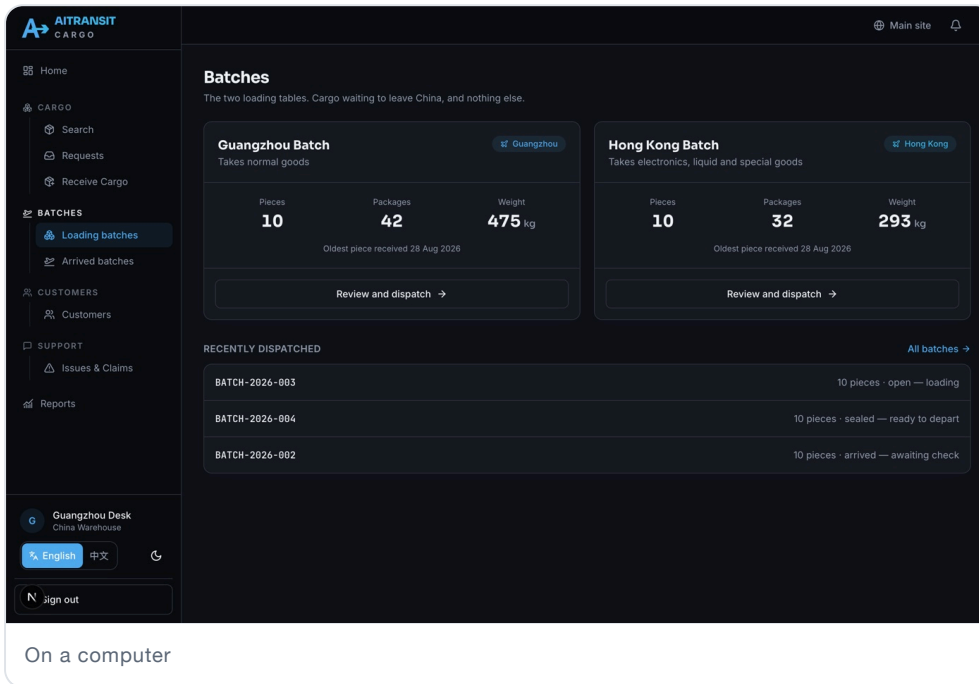

- 1 Find the customer, or record a new one. Search by name, shipping mark, phone or customer ID.**
- 2 Choose the cargo category. This is the only classification you make.**
The system works out the airport and the price from the category — you do not set either.
- 3 Choose the item from Which item, when the cargo is one clear thing.**
Finance prices a laptop differently from a box of cables. Not listed / mixed is an honest answer and is better than a wrong one.
- 4 Weigh the cargo before you type the weight.**
This weight is what the customer is billed on. Guessing it costs somebody money.
- 5 Photograph the cargo. Every consignment, every time.**
- 6 Save. The system prints a tracking number and a QR label for each carton.**

BE CAREFUL

Cargo with no photograph is the single most common cause of an argument you cannot win. If it arrives damaged, the photograph is the only thing that shows the condition it left in.

The two loading tables

Cargo waiting to leave China sits on a loading table — one for Guangzhou, one for Hong Kong. There are exactly two and they never close.

- 1 Check which table your cargo is on. The system chooses it from the cargo category.
- 2 When a flight is ready, open the table and create the dispatch from it.
- 3 Read the table before you dispatch: pieces, packages, and the date the oldest piece was received.
- 4 Dispatching closes that flight and leaves the table open and empty for the next one.

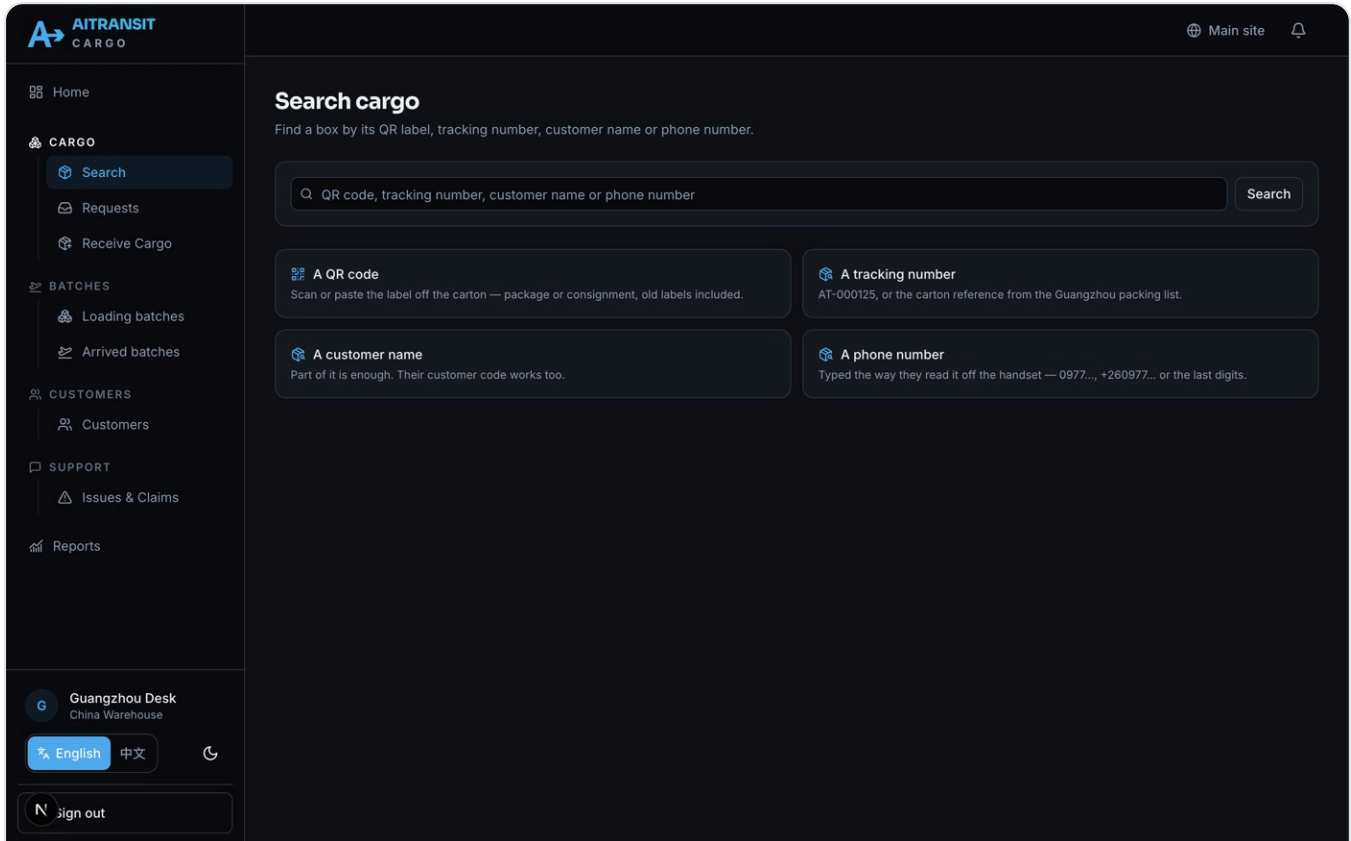

There are exactly two loading tables and they are never deleted. A dispatch is a batch; the table carries on.

GOOD TO KNOW

Normal goods and wigs fly Guangzhou. Electronics and special category fly Hong Kong. You do not choose the airport; the category does.

Finding a consignment

One box, and it accepts almost anything a customer might read out to you over the telephone.

On a computer

- 1 Type the tracking number with or without the dash. AT-000123 and at123 both work.
- 2 Or type the customer's name, their phone number, a batch number or an invoice number.
- 3 Or scan the QR code on the label.
The scanner reads our own labels only. Anything else comes back as “That code is not a AITRANSIT label”.
- 4 The result tells you where the box is and whether it has been billed.

Customers

Everyone the China desk has ever registered cargo for. Record a customer once and they are in the book from then on.

On a computer

- 1 Search before you create. A customer recorded twice becomes two credit limits and two histories.
- 2 Record the phone number in full, with the country code.
- 3 Open a customer to see everything they have ever shipped and anything they still owe.
- 4 Give the customer their customer code when you register them.

It is what they will read out to you on the telephone when they cannot find the tracking number.

Customer requests

Bookings and collection requests a customer has sent from the website, waiting for the China desk to act on them.

On a computer

- 1 **Work the oldest first. A request is somebody waiting.**
- 2 **Confirm the supplier's address with the supplier before sending a driver.**
- 3 **A booking becomes cargo only when you register it. Until then it is a message, not a consignment.**
- 4 **For a collection, open the map on the request and check the address is one a driver can reach.**
